

NT-NO2-PL10

Premium Line Electrochemical Nitrogen Dioxide Sensor

D53763 rev.3 dated 18/01/2022

Key Features

The NT-NO2-PL10 is a new electrochemical gas sensor with 3 electrodes for detection of Nitrogen Dioxide (NO₂) in a variety of gas detection applications. Exhibiting high performance with long-term stability, this compact sensor (20.4 mm diameter) is suitable for both portable and fixed gas detection instruments. The NT-NO2-PL10 is particularly suitable for use in fixed monitoring systems measuring NO₂ in low levels in underground car parks, where long term reliability and low cost are essential requirements.

The porous electrode technology enables accurate gas detection with high sensitivity. The mechanical design of the sensor gives optimum gas diffusion characteristics, and the hermetically sealed enclosure prevents costly electrolyte leakage.

NET Premium Line Electrochemical Cells

The European Standard EN 45544-2 (Workplace atmospheres. Electrical apparatus used for the direct detection and direct concentration measurement of toxic gases and vapours. Performance requirements for apparatus used for exposure measurement) specifies the performance requirements for electrical apparatus used for the direct detection and direct concentration measurement of toxic gases and vapours in workplace atmospheres, including sensors. This standard provides a consistent approach and framework for the assessment of performance criteria to manufacturers, test laboratories and users of apparatus.

But, the standard states, "It is the manufacturer's primary responsibility to ensure that the apparatus meets the requirements laid down, including environmental influences

which can be expected to affect performance".

With this in mind, N.E.T. has designed its PREMIUM LINE: a range of electrochemical cells to exceed all the performance requirements of EN 45544-2 – including upper and lower limit of measurement, deviation of the measured values in clean air and in standard test gas, deviation of the measured values at all temperatures, pressures and at any humidity, time of response (t₉₀, t₅₀), time of recovery (t₁₀, t₅₀), over-range and stability.

The Premium Line is manufactured exclusively for N.E.T. in Japan and includes sensors for CO, NO, NO₂, H₂S, SO₂, HCl, Cl₂, NH₃ (available in 4 different ranges) and the new H₂S-HT cell for high temperatures.

Mechanical specifications

All dimensions are in mm with a tolerance of +/- 0.1 mm unless stated otherwise

Pinout

Product specifications

Technical Specifications	Detectable Gas	Nitrogen Dioxide
	Detection Range	0 – 10 ppm ¹
	Maximum Overload	100 ppm
	Output Signal	1000 \pm 250 nA/ppm ²
	Resolution	0.05 ppm
	Repeatability	\pm 2%
	Typical Baseline Range (pure air)	< 0.1 ppm
	Typical Response Time (t ₉₀)	< 25 s
	Baseline Shift (-20 ~ 40 degree C)	< 0.1 ppm
	Long Term Output Drift	< 2%/month
	Weight:	Approximately 4.5 g
Operating conditions	Operating Temperature	-20°C to + 50°C
	Operating Humidity	15 to 90 % RH
	Operating Pressure Range	900 to 1100 mbar
	Recommended Load Resistor	33 Ω
	Bias Voltage	Not required
	Recommended Storage Temperature	0-20 °C
	Position Sensitivity	None
	Storage Life	< 6 months
	Warranty	2 years on mechanical defects only
	Expected Life Time	2 years

Performance data conditions: 20°C, 50%RH and 1013mBar

⁽¹⁾ Available also in the special detection range 0-30 ppm, see NT-NO2-PL30

⁽²⁾ The output signal of the NT-NO2 sensor is of opposite polarity to similar sensors such as for CO or H2S.

Typical cross sensitivities

Gas	Test Gas Concentration (ppm)	Typical Hydrogen Sulfide Concentration Equivalent (ppm)
Nitrogen Dioxide	20	10
Hydrogen	1000	0
Carbon Monoxide	300	0
Carbon Dioxide	5000	0
Sulphur Dioxide	20	0
Hydrogen Sulfide	10	-0.7 to 0
Nitric Oxide	30	0
Ammonia	100	0
Ethanol	100	0
Chlorine	1	1

Important note: The values above are typical values and should not be used as a basis for cross calibration. Cross sensitivities may not be linear and should not be scaled either. Above data based on gassing for 5 minutes using test equipment. Should be noted some cross interference break through will occur if gas is applied for a longer period of time.

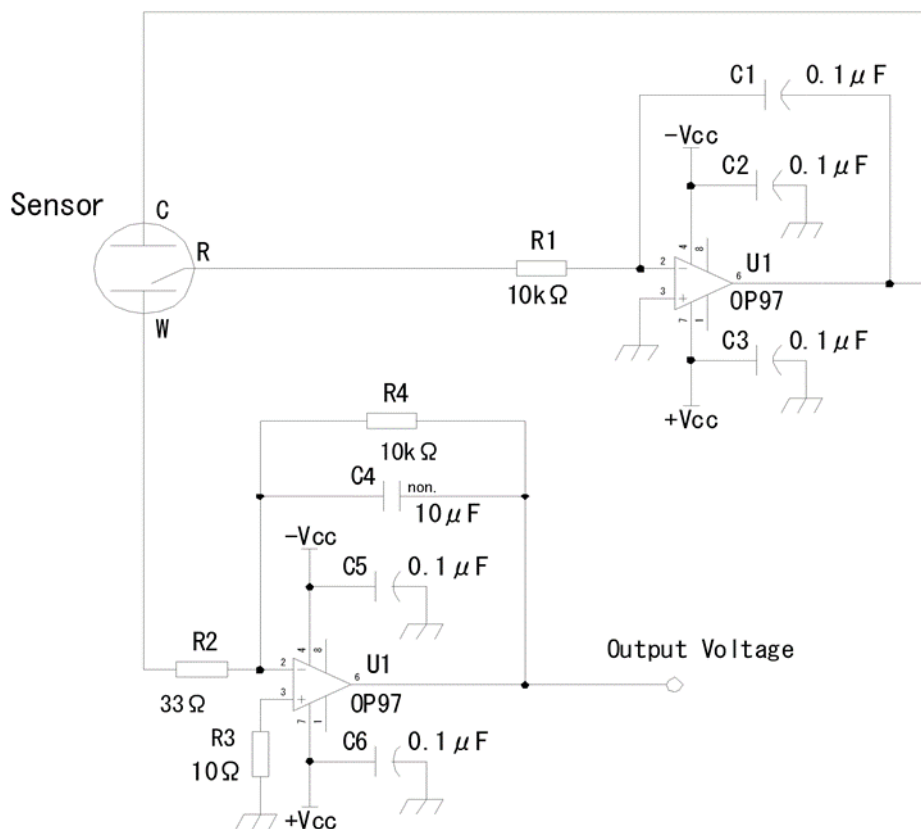

Baseline shift

Temperature dependency

Recommended Circuit Diagram

Warranty and warning

Use within specified conditions.

Sensor characteristics must be measured in clean air without noise gases.

Electrode pins must be correctly connected. Wrong connection does not allow correct functions.

Do not apply voltage directly to electrode pins.

Do not bend pins.

Do not solder to electrode pins directly. Use exclusive sockets.

Do not use contact grease on electrode pins.

Do not put excess strength on electrode pins.

If sensor housing is damaged or scratched, do not use sensor.

Do not blow organic solvents, paints, chemical agents, oils, or high concentration gases onto sensor.

Do not disassemble or change any parts.

If sensor is used under irregular atmosphere, contact us for assistance.

N.E.T. has a policy of continuous development and improvement of its products. As such the specification for the device outlined in the data sheet may be changed without notice. In case of modification of the product, N.E.T. disclaims all liability.
